AI / MACHINE LEARNING ENGINEER | ACTIVE TS/SCI

PROFESSIONAL SUMMARY

AI/ML and software engineer building dependable research and production systems, backed by U.S. Air Force operational experience. UT Austin M.S. Artificial Intelligence student with a 4.0 GPA and hands-on experience in PyTorch time-series modeling, Java/Spring Boot APIs, data pipelines, and cross-team delivery.

TECHNICAL SKILLS

Languages: Python, Java, JavaScript/TypeScript, SQL, R

ML / Data: PyTorch, TensorFlow, pandas, NumPy, MLflow, Hydra, xarray

Cloud / Software: Google Cloud, AWS, Docker, Spring Boot, GraphQL, React, Node.js, PostgreSQL

Methods / Tools: Deep learning, time-series forecasting, Transformers, GRU/RNNs, temporal validation, Git, Jira

EDUCATION

University of Texas at Austin - M.S. Artificial Intelligence

Austin, TX | Expected May 2027

GPA: 4.0/4.0 | Completed: AI Ethics, Machine Learning, Deep Learning, Reinforcement Learning

Fall 2026: Advances in Deep Learning; Planning, Reasoning, and Search Under Uncertainty; Natural Language Processing

Appalachian State University - B.S. Computer Science

Boone, NC | December 2025

Cum Laude | GPA: 3.6/4.0 | Data Science Certificate | Senior Honors Thesis

RESEARCH AND SELECTED PROJECTS

HYDRA - Deep-Learning Streamflow Forecasting Research

2025 - Present

Ongoing research; manuscript in progress

- Built a modular PyTorch pipeline for NOAA National Water Model forecasts and used Google Cloud BigQuery and Cloud Storage to acquire issued forecasts with traceable timing and source metadata.
- Designed Transformer/GRU experiments, leakage-aware temporal splits, automated normalization, and hydrologic evaluation; preliminary experiments produced **26-54% lower RMSE than the LSTM baselines tested**.
- Preparing a *Water Resources Research* manuscript and maintaining versioned artifacts, diagnostics, figures, and technical reports for scientific review.

Harmony - AI-Agent Transaction Systems Research

2025 - Present

- Designed an isolated AWS research-compute path for reproducible CPU/GPU experiments while keeping local tooling as the control and review plane.
- Building a modular Python testbed that separates data, forecasting, validation, policy controls, audit state, and simulated execution for safe, reproducible experimentation.

CONFERENCE ACTIVITIES

AGU26 Annual Meeting - Scientific Workshop Facilitator

San Francisco, CA | December 7-11, 2026

- Will facilitate the accepted AGU26 scientific workshop *Best Practices for AI and Agentic Workflows in Earth Science Research*, teaching earth and environmental scientists practical AI methods for research workflows.
- Submitted a separate HYDRA streamflow-forecasting abstract to the AGU26 scientific program; the abstract remains under review.

PROFESSIONAL EXPERIENCE

USAA - Software Engineering Intern

San Antonio, TX | May - August 2025

- Developed GraphQL API capabilities in Java and Spring Boot for customer-data workflows used across enterprise channels.
- Enhanced an internal troubleshooting tool by integrating source-of-record and non-source-of-record name and employment data, improving visibility for business users.
- Built JavaScript comparison views and delivered changes through an Agile/Scrum workflow using Git and Jira.
- Collaborated with product owners, engineers, and internal users to deliver usable, secure, and operationally reliable API changes.

United States Air Force - Executive Missions Aviator

JB Andrews, MD | August 2020 - April 2023

- Maintained passenger safety, logistics, and schedule reliability for distinguished guests aboard Air Force 2.
- Coordinated mission planning with flight crews, security teams, and executive staff under exacting operational standards.
